

Raycop – “The Dust Mite Buster”

Introducing the world’s first – UVC Anti-Allergy Cleaner

The Dust Mite Buster

Children in Singapore are coming more susceptible to common ailments such as allergic rhinitis, eczema, wheezing and other respiratory disorders. One in five children in Singapore suffer from asthma, one of the highest rates of childhood asthma in the world. The one most common trigger of the problems is the house dust mite.

Raycop attacks the source of the problems – dust mites, dust mite feces and bacteria by removing them at the site eg mattresses, crib pads etc. It eliminates the above allergens with a UVC sterilisation lamp, vacuums and traps the allergens with a 3M Filtrete Hepa Micro Allergy Filter.

Raycop is the world’s first UVC anti-allergy cleaner that eliminates 93% of dust mites* and kills 99% of bacteria*. Raycop is proven to remove mould** and has been shown to deactivate the H1N1 Influenza A virus**. It is specially designed to clean mattresses, sofas, crib pads, linens and other fabrics.

*Japan’s Tokyo Allergy Research Center found that Raycop decreased the number of dust mites by 93.1% after 15 minutes of exposure. It was also verified that Raycop’s UVC sterilisation process kills 99.9% of bacteria within 2 seconds.

**The Japan Food Research Laboratories found that Raycop effectively removes all moulds and reduced the H1N1 virus by 77% within 2 seconds of sterilisation.

Raycop’s 3 steps allergy care system

Step 1: Raycop uses a patented vibrating pad that shakes minute particles and dust mites free from mattresses, pillows and linens.

Step 2: Raycop next uses a UVC sterilisation lamp made by Sankyo, Japan to kill bacteria, dust mites and other micro-organisms, leaving surfaces germ free.

Step 3: Raycop have a vacuum and 2 stage filtration system that trips all dust and allergens. It incorporates a 3M Filtrete HEPA Micro Allergy filter that trips up to 0.3 micron or 99.97%.

Proven Safe. Reliable and Effective

Raycop is a name you can trust. Raycop UVC Anti-Allergy Cleaner has been approved by governments and consumers’ organization worldwide, even winning the coveted British Allergy Foundation “Seal of Approval”.
